METAL CEILINGS - PART OF THE DESIGN

DAMPA metal ceilings are elegant, precise, and resilient. Over the decades DAMPA has produced and delivered quality metal ceilings for amongst others hospitals, educational facilities, airports and transport hubs and office buildings all over the World.

With more than 60 years of experience, DAMPA provides flexible ceiling solutions, combining the expertise of competent employees and local production, enabling fast, prompt delivery.

Metal ceilings are compatible with integrated ventilation, sprinklers and the new generations of LED light. Close cooperation with leading manufacturers results in a wide range of build-in components compatible with DAMPA ceilings.

DAMPA's suspended ceilings are easily and precisely installed in DAMPA suspension systems. Simple dis- and reassembling make fast and easy access to installations behind the ceiling possible, and the ceiling will retain the symmetric lines even after repeated disassembling.

DAMPA product program includes both open and concealed ceilings in standard module dimensions. Painted or laminated surfaces of DAMPA ceilings open up a great number of design possibilities.

DAMPA®

DAMPA PLANOSTILE

DAMPA Planostile are steel tiles in the standard width 300 and 600 mm and a length up to 3200 mm. Planostile tiles are produced for Clip-in and Hook-on suspension systems. The sharp edge of the tile creates a flat, continuous surface to the ceiling.

DAMPA PANEL

DAMPA Panel 10/200/300 is a concealed ceiling system of different panel types and modules. All panel types fit the same kind of carrier system, this allows for a host of individual combinations. These panels are well suited to both flat and curved ceiling surfaces.

DAMPA INTERVAL

DAMPA Interval adds a minimalist expression to the ceiling. The open area between the panels is variable, this allows for a greater scope in relation to design and functionality of the ceiling. DAMPA Interval has the standard dimensions 40x30x40 mm, other dimensions are to be produced as required.

DAMPA TILES

DAMPA Tiles are available in aluminium and steel, as Clip-in, with or without bevelled edge to be installed in concealed suspension systems, and as Lay-in to be installed in visible T-runners. Standard dimensions are 600x600 or 300x300 mm. Additionally DAMPA offers delivery of the well-known Clip-in Tiles in steel in new practical dimensions, for example 300x1200 mm, 300x1500 mm or 600x1200 mm. Choosing the sharp edged tile makes it possible to create a flat, continuous surface to the ceiling.

CLIP-IN CLASS A

With the same design potential as DAMPA Tiles and with an inlay of stone wool the standards of Acoustics Class A are fulfilled. DAMPA Clip-in Class A meets the demands of optimal acoustics at for example educational institutions.

ACOUSTICS

DAMPA's metal ceilings ensure an exceptional acoustic environment, adjustable to varying demands on reverberation times. The ceilings are the optimal solution for areas where a high level of concentration is required whilst ensuring a pleasant environment.

DESIGN

Metal's inherent flexibility means that the sky is the limit for your ceiling design. Whether you are working in steel or aluminium, there is an endless array of options available at your disposal, ranging from design, through to dimensions and surfaces.

ECONOMY

The lifespan of DAMPA metal ceilings are exceptionally long. Easy hassle free installation and disassembling of the ceilings lead to low long term running costs, on balance this results in a greater return on your investment, lowering overall costs.
